

Master Recovery

Private recovery, without a single point of trust

PROBLEM

Your backup is either

- **Easy to lose**
- **Easy to steal**
- **Controlled by one provider**
- **Revealing who protects you**

SOLUTION

- **Split the secret**
- **Hide it**
- **Let only trusted signers approve recovery**

**\$90B+ in Bitcoin may already be
inaccessible due to lost keys**

FLOW

1. **STORE**
2. **DISTRIBUTE**
3. **AUTHORIZE**
4. **RECOVER**

METADATA RESISTANCE

Hide the map, not just the data.

- **Who owns the secret**
- **Which guardians hold it**
- **When recovery happens**

SECURITY MODEL

- **Signers authorize**
- **Guardians store**
- **24h+ cancellable recovery**

USE CASES

- **Wallet seeds**
- **Private keys**
- **API keys**
- **Credentials**
- **Sensitive files**
